

## CelloTrack Family Announcements – May 2012

Dear Valued Customer,

Date: 28/05/2012

Please see below news and updates regarding our CelloTrack Family:

### **CelloTrack Power with One Output**

Cellocator is proud to announce on the CelloTrack Power with One Output, the newest member of the CelloTrack Family. This unit is a special variant of the CelloTrack Power and supports one protected open drain output for general purpose interface in addition to the one input. The output is controlled by both Serial and OTA messages. The main purpose of this change is to allow immobilization of heavy equipment remotely, as done with regular in-vehicle units.

You are welcome to review the updated [CelloTrack Family Overview](#) for more information.

### **New Enfora Modem**

As part of our technical notifications policy we would like to inform you on a future change regarding the Enfora Modem used in the CelloTrack Family product line.

Enfora has declared End of Life of the current model of its GSM0308 modem, used by the CelloTrack Family, and has replaced it with a new fully compatible modem with the same name. Enfora modem software has been changed in order to support the new modem model.

In order to support the new modem and trace the modems' models, we have developed a new firmware version named FW 29a. The new FW version is fully backward compatible and supports all previous CelloTrack units. Please note that CelloTrack with the new Enfora Modem model is operational only with the new FW29a. The CelloTrack units' part numbers will remain as is.

The CelloTrack with the new modem and FW has been tested and approved by Cellocator's engineering team.

You are welcome to review Enfora's announcements on the [modem](#) and its [software](#) change, declaring full functional, performance and certification compliance.

## CelloTrack Family Announcements – May 2012

The change is expected to take place in mid July 2012. As of that date all CelloTrack units shipped to customers will utilize the new modem and FW29a only.

### **FW Version 29a for CelloTrack.**

CelloTrack FW V29a adds the following main functionalities to CelloTrack units:

- ◆ Support of the above mentioned CelloTrack Power with one output.
- ◆ Support of the latest Enfora modem, version GSM0308 with FW 1.1.2 PK47,D10

The version is backward compatible and supports all shipped CelloTrack units.

You are welcome to review the CelloTrack FW V29a [release notes](#) for more information.

The [FW Upgrade Files](#), the PL files ([CelloTrack](#), [CelloTrack Power & Lighter](#) and [CelloTrack XT](#)), the protocols ([programming manual](#), [wireless](#) and [serial](#)), the [Full Package](#) and the [Product FW latest versions](#) have been updated.

For pricing and delivery information, you are most welcome to contact your appropriate sales manager.

Please note that the above links require access to our [Info Login](#) section on our web site.

Should you have any questions on the CelloTrack changes, you are more than welcome to contact the product management department or your appropriate sales manager.

Kind Regards,

Natan Degani
